SUMMARY

Motivated Python Backend Developer with hands-on experience designing, building, and deploying scalable RESTful APIs using FastAPI. Demonstrated expertise in JWT authentication, PostgreSQL, Docker containerization, and AWS cloud deployment. Proven ability to deliver production-ready backend solutions with strong attention to security, performance, and clean architecture.

EXPERIENCE

Backend Engineer

Personal Projects 03/2025 – Present Islamabad, Pakistan

Self-directed backend development focused on production-ready APIs

- Architected and deployed a production-ready ride-sharing REST API serving intercity commuters in Khyber Pakhtunkhwa, Pakistan.
- Implemented JWT authentication with role-based access control for three user roles: passenger, driver, and admin.
- Containerized the application using Docker Compose and deployed on AWS EC2 with Nginx as reverse proxy.
- Integrated Alembic for database migrations, enabling safe schema changes in production without data loss.
- Designed async PostgreSQL database with SQLAlchemy ORM following clean architecture principles.

Skills

- Backend Development :** Python • Django/FastAPI • RESTful API Design • Pydantic • Async Programming • API Versioning
- Database & ORM:** PostgreSQL • SQLAlchemy (Async) • Alembic Migrations • SQLite • Database Optimization
- Auth & Security:** JWT • OAuth2 • bcrypt • Role-Based Access Control (RBAC) • API Rate Limiting
- DevOps & Deployment:** AWS EC2 • Docker • Docker Compose • Nginx • Uvicorn • Linux • Git • CI/CD Basics
- Tools & Workflow:** Git/GitHub • Postman • VS Code • Cursor • pytest • Black • Ruff

Backend Engineer

Personal Projects 02/2026 – 03/2026 Pakistan

An AI-powered developer tool for automated Python code repair and analysis.

- Engineered an AI-powered bug fixing API using FastAPI and Google Gemini that automatically detects and repairs Python syntax errors.
- Implemented a self-healing agentic loop that feeds failed attempts back to the AI as context, achieving successful repair in up to 3 retry cycles.
- Designed AST syntax validation layer to verify AI fixes before writing to disk, eliminating risk of corrupt file overwrites.
- Built bulk folder scanner using ast.parse() to detect broken files without triggering unnecessary AI API calls. Deployed on AWS EC2 with Nginx reverse proxy as a systemd service, ensuring 24/7 uptime with automatic restart on server reboot.

Backend Engineer

Expense Tracker API (Personal Project) 01/2025 – 02/2025 Islamabad, Pakistan

- Built a personal finance REST API with full CRUD operations and per-user data isolation.
- Implemented JWT authentication ensuring strict user-level data access control.
- Deployed live on AWS EC2 with proper environment configuration and security practices

Areas of Expertise

- Backend API Development
- RESTful API Architecture & Design
- Database Design & Migrations
- JWT Authentication & Security
- Docker Containerization
- AWS Cloud Deployment
- Clean Code & Best Practices
- Problem Solving & Debugging

EDUCATION

Bachelors in Computer science Engineering
University of Engineering and Technology, Mardan
01/2021 – 01/2025

Let’s build something awesome together.
